1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-5,8-12,15-18, and 21-24 rejected under 35 U.S.C. 102(e) as being clearly anticipated by Weaver et al. (5,715,526).

Weaver et al. disclose an apparatus and method for controlling transmission power in a cellular communications system comprising the steps of calculating, at the base station, an interference measure based on a power of a pilot signal received at the mobile unit; setting an initial power level in a forward link based on the interference measure; determining a difference between the mobile unit received pilot power and a power of the pilot signal transmitted from the base station; receiving a request for services transmission from the mobile unit; setting an initial power level; and extracting the mobile unit received pilot power from the transmitted messages (see abstract and details of figures 1-2).

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6-7,13,14,19,20,25, and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Weaver et al. in view of Keevill et al. (6,359,938).

Weaver et al. disclose all the subject matter of the claimed invention with the exception of the interference measure being monotonically related to the initial power level in a communications network. Keevill et al. from the same or similar field of endeavor teaches a provision of the interference measure being monotonically related to the initial power level. Thus, it would have been obvious to the person of ordinary skill in the art at the time of the invention to use the interference measure as taught by Keevill et al. in the communications network of Weaver et al. for the purpose of making the system more reliable.
